C/C++

Trimble employees in over 30 countries

Electrical Engineers

Machine Control Systems

Trimble products are used in over 141 countries

Embedded Firmware

Precision Agriculture

OpenGL

Android

Computer Science

Photogrammetry

GIS

Java

GPS

An exciting  
entrepreneurial  
company, with  
a history of  
exceptional  
growth

### Positions Include:

- SQL Server Database Administrator
- Systems Engineer
- Oracle Business Analysts
- Release Engineer
- Agile PLM/Data Management
- Firmware Engineer
- Oracle Technical Specialist
- Test Engineers
- Product Engineer
- Infrastructure Architect
- Embedded C++ Software Engineer
- Technical Product Manager
- Cloud Infrastructure Architect/Engineer
- Cloud Application Architect/Engineer
- Automation Engineer
- Software Engineer

### Systems Engineer

The Systems Engineer will be responsible for the deployment, administration, monitoring, analysis and support of Trimble's application services and the systems, servers and databases on which they are deployed.

- BS in an IT related field or equivalent training combined with 5–7 years of experience managing systems in mission critical enterprise environments.
- Experience installing, configuring and managing VMware infrastructure, Windows and Linux (Solaris) systems, and using automation, power CLI or equivalent tools.
- VMware certified – SAN/NAS experience (Hitachi SAN equipment).
- Experience with Amazon Web Services.

### Infrastructure Architect

The Infrastructure Architect/Engineer will be responsible for architecting high availability systems for the deployment, administration, monitoring and support of Trimble's application services and the systems, services and databases on which they are deployed.

- BS in an IT related field or equivalent training combined with 7+ years of experience architecting systems in mission critical enterprise environments.
- Guide application and infrastructure teams in defining standards and requirements for critical resources.
- Experience architecting and maintaining Amazon Web Services.
- Develop software tools or scripts which improve production and operational efficiency, using shell scripting, Perl, VB, SQL, etc.

### Oracle ERP/CRM Business Analyst

Implementing ERP/CRM solutions and best practices across the company and assisting the user community in developing their applications and providing assistance with gap analysis, configurations, translating business requirements into functional/technical designs and preparing test plans and test scripts.

- BS in Computer Science or a related field combined with a minimum of 5 years' experience with Oracle applications, including but not limited to Order Management, Inventory, Purchasing, BOM and Work In Process.
- Experience working with Oracle E-Business Suite, including ERP & CRM applications.
- Experience leading at least three full cycle Oracle application implementations.

### Test Engineer

The Test Engineer participates on an agile scrum team working on new feature development, maintaining existing features and bug fixes with a large emphasis on test automation.

- Significant UI automation experience; strong ability to write automation test scripts from scratch.
- 5 years' minimum software development/engineering experience with Visual Studio, C#, .NET or Java.
- Selenium WebDriver experience preferred.

### Technical Product Manager

The Product Manager is responsible for orchestrating all Trimble organizational elements in order to achieve total product success as measured by revenue growth, market position and profitability.

- Contributes to the creation of a product business plan, defines the multi-generation market requirements for the product. This includes factors such as product features, product positioning, promotion, distribution and support as well as the market share, revenue and financial targets.
- Creates and owns product definition after project approval.
- Participates as a member in the product development team and ensures the output remains consistent with product objectives.
- Software product management experience preferred.

### AWS Application Software Architect

Looking for a software engineering architect with 10+ years of experience in large distributed systems architecture and development.

- Define architecture of large, distributed, spatial, cloud solution.
- AWS experience preferred, such as a strong understanding on how to interact with AWS (AWS SDK, AWS API, Command Line Interface, AWS Cloud Formation).
- Hands-on experience with AWS deployment and management services.
- Experience in architecting cloud infrastructure and application solutions based on large datasets.

### SQL Server/Oracle DBA

The DBA is responsible for providing database solutions to meet the requirements of the development team for current and future product offerings.

- Develop scripts for scheme changes and backend stored procedures for data manipulation.
- Proactively monitor database to eliminate performance bottlenecks; troubleshoot performance issues and perform database tuning activities.
- BS in Computer Science or equivalent plus a minimum of 5 years' experience in database development & administration.
- Experience with SQL Server 2008 or Oracle 9i thru 11g.

### Data Management Analyst

Responsible for global support issues and projects for Trimble's product lifecycle software and processes (Agile, Oracle PLM). This position is part of a central data management group.

- Responsible for following, adhering to and enforcing processes involving Agile and associated software.
- Responsible for following, adhering to and enforcing data management processes related to Oracle PIM.
- Ongoing responsibility for Data Integrity determined by Operations and Business units.
- Translates business requirements and assesses, identifies and implements system process improvements.
- Provide Agile and Oracle PIM training on a periodic basis.
